Pet Food POISONS got into Fish Farming

Farmed fish given melamine-tainted feed, U.S. officials say

U.S. investigators are visiting fish farms after learning of at least one farm that used feed tainted with melamine-- a chemical used to make plastics and fertilizers, the U.S. Food and Drug Administration said Tuesday, May 8.

Dr. David Acheson, the FDA's assistant commissioner for food protection, said while U.S. companies had used the contaminated ingredient in pet food that killed pets across the nation, a Canadian company used it to produce fish meal.

U.S. officials did not say whether any of the farmed fish given the contaminated feed entered the U.S. food supply, but noted that the fish of at least one firm were too young to be sent to market. Canada's food inspectors have issued border lookouts for vegetable proteins coming from China to prevent melamine from contaminating the human food chain.

The FDA said the Canadian-made feed included what was believed to be wheat gluten imported from China, said that shipments of wheat gluten and rice protein concentrates from China were in fact lots of simple wheat flour spiked with melamine, which falsely boosted the nutrient content.

"What we discovered is these are not wheat gluten and rice protein concentrate but in fact are wheat flour contaminated by melamine," Acheson said.

Linda Place encourages residents to complete a survey of "critical concerns."

Mana'e Mapping Project

Members of the East Molokai community group Malama Pono O Ka 'Aina joined forces with a dozen University of Hawaii -- Department of Urban and Regional Planning students during the Kuhio Day weekend to conduct field work on selected public lands, and to review existing maps, surveys and reports of the Mana'e community. Hosted by Milton and Linda Place, the students and project members previewed the Mana'e landscape in preparation for field and survey work to be conducted this summer.

The Mana'e Mapping Project will facilitate the compilation of all existing information on cultural and natural resources of East Molokai onto a set of reference maps. The completed maps will become part of the Molokai Community Plan and Maui County General Plan, and encourage consideration of these resources inland use and land management decisions.

Summertime fieldwork will be conducted with guidance from private landowners and the Maui Planning Department, to reconfirm and obtain GPS coordinates for known cultural sites. In addition, Malama Pono O Ka 'Aina will ask landowners and kama'aina to provide information on cultural resources they know of which have not been previously documented.

This project will support implementation of many objectives called for in the Molokai Community Plan, such as protection of cultural resources, and maintenance of natural resources relied upon by native Hawaiian practitioners. Project partners include members of Malama Pono O Ka 'Aina, the Maui County Department of Planning, the Queen Liliuokalani Children's Center, the University of Hawaii--DURP, and the Society for Molokai Archaeology.

Cops admit planting marijuana to cover murder by cops of 92-year-old woman

April 27, 2007, the Atlanta police provided even more horrifying evidence that the government's war on drugs continues to be a disastrous failure, costing innocent lives because of police military style raids on homes.

The case involves one of the latest casualties of war: 92-year-old Kathryn Johnston of Atlanta, whose November 21 death was the result of a botched no knock drug raid on her home.

A search warrant stating crack cocaine was being sold in her apartment allowed the officers to cut through the burglar bars protecting Johnston's home and burst through her door without identifying themselves.

Johnston, who lived alone, apparently mistook the plainclothes officers for intruders and fired on them with an old revolver her niece had given Johnston for protection in her notoriously dangerous neighborhood.

She didn't hit any of the officers. The police responded, firing 39 shots, killing Johnston and apparently wounding three of their own.

After her death and a fruitless search of her home, the officers planted marijuana to justify the raid.

An excerpt from an Associated Press article reveals the despicable depths to which the officers sank before, during, and after the raid: The deadly drug raid had been set up after narcotics officers said an informant had claimed there was cocaine in the home.

When the plainclothes officers burst in without notice, police said, Johnston fired at them, and they fired back.

Assistant U.S. Attorney Yonette Sam-Buchanan said Thursday that although the officers found no drugs in Johnston's home, Smith placed three bags of marijuana in the home as part of a cover story.

The case raised serious questions about no-knock warrants and whether the officers followed proper procedures.

Atlanta Police Chief Richard Pennington asked the FBI to lead a multi-agency probe. He also announced policy changes to require the department to drug-test its nearly 1,800 officers and require top supervisors to sign off on narcotics operations and no-knock warrants.

To get the warrant, officers told a magistrate judge that an undercover informant had told them Johnston's home had surveillance cameras monitored carefully by a drug dealer named Sam. [Constitutionally, only a Grand Jury can issue a warrant, but malfeasant attorneys and attorney-judges today are complicit with police in the corruption of our justice system and law enforcement].

After the shooting, a man claiming to be the informant told a television station that he had never purchased drugs there, leading Pennington to admit he was uncertain whether the suspected drug dealer actually existed.

No-Smoke Medical Marijuana Validated

SAN FRANCISCO, CALIFORNIA — Two new studies, one from the University of California, San Francisco, and the other from the University at Albany, State University of New York, provide strong evidence that technology now allows medical use of marijuana with the rapid action and easy dose adjustment of inhalation, but without the respiratory hazards associated with smoking.

Also, medical marijuana laws do not cause increased teen abuse of marijuana in any of the states, like Hawaii, where medical marijuana is permitted by law.

Vegetarian Diets: Healthier, Reduce Global Warming

Both the burning of fossil fuels to power machinery during food production and other emissions associated with livestock waste contribute to environmental problems, the University of Chicago's Gidon Eshel and Pamela Martin wrote in their report. A strictly vegetarian diet requires the production of a ton and a half less of greenhouse gases, and avoids other environment, health problems as well.

Cutting down on just a few eggs or hamburgers each week, however close you can be to a vegan diet and further from the meat diet, the better your diet is for the planet. If you simply cut down from two burgers a week to one, you've already made a substantial difference.

Livestock are one of the most significant contributors to today's most serious environmental problems, greenhouse gases, primarily methane and nitrous oxide. An example would be manure lagoons that are associated with large-scale pork production. "Those emit a lot of nitrous oxide into the atmosphere."

It's not just the well-known and frequently joked-about flatulence and manure of grass-chewing cattle that's the problem, according to a recent report by the Food and Agriculture Organization of the United Nations. Land-use changes, especially deforestation to expand pastures and to create arable land for cattle feed, is a big part. The use of energy to produce fertilizers, to run the slaughterhouses and meat-processing plants, and to pump water far exceeds that for a vegetarian diet. Growing your own, saves transport costs.

Volunteers listen carefully to Louise Miguel's instructions for the next thought-provoking exercise. Below: Andrea Benis

Kilohana Celebrates Volunteers Appreciation Day

Andrea Benis, this year's Kilohana School's Outstanding Volunteer was honored at a special assembly. Students and teachers thanked Auntie Andrea with lei and gifts for her work in the classroom teaching art, making the new May Day kahili and coordinating the painting of a permanent backdrop for the outdoor stage - and many other things. Much appreciated is Andrea's creativity, baked goods, and resourceful recycling, according to PCNC Facilitator Louise Miguel.

Following the assembly, Volunteers were treated to a workshop on the theme "Relationships" with creative, thought provoking exercises -- and then the famous Kilohana refreshments - so ono. Prepared by school staff, PCNC, Ohana Council and PSAP staff, the refreshment ingredients were provided by Queen Liliuokalani Children's Center.

Ron Paul for President Ignored by Zionist Controlled Media

MSNBC reported that Ron Paul scored the highest positive votes in both Republican Presidential debates he attended. That means he beat out Romney, McCain and Giuliani. But, there was no mention of these poll results in the major media controlled by Zionists. Why? [Repeat: controlled by Zionists!]

Dr. Ron Paul, Not Romney, won the both GOP Presidential Debates.

Dr. Ron Paul is the only candidate on the Republican ticket who would seriously challenge the status quo of the neocons currently running our country into the ground. He has a voting record unlike anyone in Congress. As has been reported by many, Ron Paul has never voted to raise taxes, has never voted for an unbalanced budget, has never voted for a federal registration on gun ownership, has never voted to raise congressional pay, has never taken a government-paid junket, and has never voted to increase the power of the executive branch of the federal government. Furthermore, he voted against the Patriot Act and was one of only a handful of congressmen that voted against the Iraq War.

When a candidate wins two debate polls in a row that are reported by the likes of MSNBC on its own web page, that is news, especially since the winner of both polls allegedly had no chance to win the GOP nomination. The media normally jumps on that kind of news, because people in America love underdogs, but not this time. Why? [Repeat: media is controlled by Zionists!]

No, this is a concerted effort by Zionist controlled media to control elections by preventing good candidates from public name recognition. Its the same thing that happens in Hawaii every time we have an election.

Please review below what Representative Ron Paul stands for, and far more importantly, what he has done. Among other things, Ron Paul is the only congressmen who demanded Congress declare war before attacking Iraq.

He does not participate in the lucrative congressional pension program.

He returns a portion of his annual congressional office budget to the U.S. treasury every year.

Congressman Paul introduces numerous substantive legislation each year, probably more than any single member of Congress.

Congressman Ron Paul is the leading advocate for freedom in our nation's capital. As a member of the U.S. House of Representatives, Dr. Paul tirelessly works for limited constitutional government, low taxes, free markets, and a return to sound monetary policies. He is known among his congressional colleagues and his constituents for his consistent voting record. Dr. Paul never votes for legislation unless the proposed measure is expressly authorized by the Constitution. In the words of former Treasury Secretary William Simon, Dr. Paul is the "one exception to the Gang of 535" on Capitol Hill.

Ron Paul was a flight surgeon in the U.S. Air Force during the 1960s. He and his wife Carol moved to Texas in 1968, where he was a specialist in obstetrics/gynecology, and delivered more than 4,000 babies. They are the proud parents of five children and have 17 grandchildren.

AlohaCare announces Molokai Informational Sessions

Beginning July 1, 2007 AlohaCare will provide QUEST coverage for the island of Molokai. AlohaCare inviting QUEST members and the community to a free Chili & Rice Event with live entertainment on:

Wednesday, May 30, 2007 at the Mitchell Pauole Center
and Thursday, May 31, 2007 at Kilohana Community Center
4-6pm both sessions.

Families can learn about their new health plan and other health resources available in the community.

Sign up for the Event by filling out a flyer by May 18, 2007

Take Survey at <http://hawaii2050.org/survey.php>

Hawaii 2050 looks to address the appropriate and long-range plans and public use relating to water, land use (including housing), energy, food production, waste, air, pollution, and environmental quality. Hawaii weather and fragil natural resources provides a preferred quality of life for residents.

But we face a growing number of challenges and pressing issues that threaten our limited natural resources, rich cultural heritage, and precious way of life. Issues related to population growth, carrying capacity, governance, justice and equity, and living within an island-based community will be addressed by all who participate in online surey and meetings.

If you would like to share your thoughts with us on these important issues, be it erosion, over population, boom boxes, jet skies racing reefs,

development, crooked politicians, crooked judges and attornies, hunting access, fishing, recreation, farming, culture, please send an email to info@hawaii2050.org

Problems from traffic gridlock and congestion on most islands; and population growth increasing at a rapid rate, particularly on the neighbor islands – all raise questions about the long term limits of growth on these islands and the need for all of us to begin planning and acting now to ensure a positive and sustainable future for the people of Hawaii, especially Molokai.

How Hawaii will meet the increasing demands of a rising population [and nearly seven million visitors annually]

and further development have become critical issues that demand immediate action. Improving Hawaii's planning process therefore becomes a timely and important government function conducted by the People to ensure and protect the Hawaii that Citizens want.

State policies could be based on the traditional Hawaiian concept of the ahupuaa resource and behavioral management system—a system based on making sure that people respect the limited land, water, and other scarce natural resources from the mauka to makai.

We currently face a number of challenges that threaten the quality of life of Hawaii's people, including oppressive government violating Citizen rights, murder by cops and crooked judges, disqualified by felony Linda Lingle still usurping office due to lack of law enforcement, an escalating drug epidemic, rising crime and a growing prison population, a public education system straining to meet the needs of its diverse student population, degradation of our natural public recreation areas with jet skies& dirt bikes that should be operated in controlled areas, increasing numbers of homeless families, health care services.

The Hawaii 2050 task force seeks to ensure that the qualities and characteristics of Hawaii's island lifestyle are preserved and perpetuated, and are embodied in the sustainability plan. To this end, the sustainability plan should address health, human services, education, recreation, culture, arts, and other aspects of quality of life.

Share your thoughts with us on these important issues, please send an email to info@hawaii2050.org
